MULTISLICE CT ANGIOGRAM OF BOTH LOWER LIMBS

Protocol:

Multislice ultrafast CT angiography of the lower abdominal aorta & both lower limbs was obtained. MIP & VRT images were obtained from both lower limbs.

Observations:

Mild diffuse atherosclerotic changes are seen in aorta without obvious luminal narrowing.

Mild diffuse atherosclerotic changes are seen in superior mesenteric artery and its proximal branches.

Vessels	Right	Left
Common iliac artery	Normal	Normal
External iliac artery	Mild diffuse atherosclerotic changes	Mild diffuse atherosclerotic changes
Internal iliac artery	Normal	Normal
Common femoral artery	Mild diffuse atherosclerotic changes	Mild diffuse atherosclerotic changes
Superficial femoral artery	Mild to moderate diffuse atherosclerotic changes causing 30 to 40% luminal narrowing	Mild to moderate diffuse atherosclerotic changes causing 30 to 40% luminal narrowing
Deep femoral artery	Mild narrowing	Mild narrowing
Popliteal artery	Mild narrowing	Mild narrowing
Posterior tibial artery	Diffuse atherosclerotic changes causing moderate 50 to 60% luminal narrowing. The distal artery is diffusely calcified.	Diffuse atherosclerotic changes causing moderate 60 to 70% luminal narrowing. The distal artery is diffusely calcified.
Common peroneal artery	moderate 50 to 60% luminal narrowing.	moderate 50 to 60% luminal narrowing
Anterior tibial artery	Severe occlusion from origin	Severe occlusion from origin
Dorsalis pedicles	Mild atherosclerotic changes supplied by branch of posterior tibial artery	Mild atherosclerotic changes supplied by branch of posterior tibial artery

Thanks for the reference.
