TO WHOM SO EVER IT MAY CONCERN

This is to certify that Mrs. Shaheen Sultana, a 53-year-old female (YH No: 116338795), is undergoing treatment for severe bronchial asthma with Type 2 respiratory failure. She has been experiencing monthly hospital admissions since December 2024 due to recurrent exacerbations.

Treatment Plan:

- Hospitalization in ICU with continuous monitoring.
- Mechanical ventilation for approximately 7 days to stabilize her condition and assess underlying causes.
- Medications include systemic corticosteroids, inhaled bronchodilators, and supportive therapies.
- Advanced diagnostics such as HRCT chest and ABG monitoring.
- Cardiology consultation to evaluate mild cardiac changes contributing to her respiratory issues.

The estimated cost of treatment is approximately ₹10Lakhs

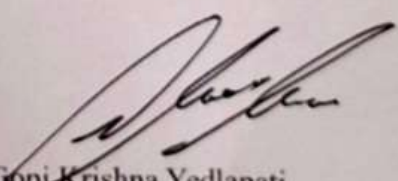

DIAGNOSIS:

- * Acute exacerbation
- * Bronchial Asthma
- * Accelerated HTN
- * Refractory Bronchospasm
- * Acute Coronary Syndrome
- * Anxiety Disorder
- * Type 2 Respiratory Failure

CURRENT VITALS :

Temp: 98.6F* , PR-100/mm
RR 20/min , BP 160/85
SPO2 95% on v/c mode (Fio2 40, peep 5)
