

FIRST PREMIUM MRI & CT SCAN IN SOLAPUR

IMPRESSION

- Bilateral consolidations are noted in basal segments of lower lung lobes and posterior segments of upper lung lobes.
- Patchy ground-glass opacities are also noted in bilateral lung fields with mild associated smooth interstitial septal thickening.
- Multiple centrilobular reticulonodular opacities are diffusely in bilateral lung fields
- Bilateral mild pleural effusions.
- Bilateral apical pleural thickening is noted with few fibrotic strands in the upper lung lobes.

Findings are s/o acute on chronic infective etiology-p/o Koch's needs to be considered.

RECOMMENDATION

Suggested clinical correlation.
