SPECIMEN

Endometrial biopsy

GROSS

Received brown membranous tissue amounting to 1ml. Entire tissue embedded

MICROSCOPY

Sections studied shows endometrium. With altered architecture with stromal hyperplasia and gland to stromal ratio 1:3. The glands are inactive low proliferative type. Stroma is dense hyperplastic and showing pseudo deciduous change. Focal areas of fibrinous deposition and haemorrhage identified. No features of malignancy seen,

IMPRESSION

Features are suggestive of disordered proliferative endometrium possibly due to exogenous hormones
